Summary

Engineer-turned-PM with 4 years of frontend product delivery in FinTech and IoT SaaS. Shipped goCayin's Device Management module end-to-end at Cayin; independently designed and launched **HaoYuanShu** (好願書), an iOS app, using a full AI-Native PM workflow —source curation, MRD/PRD authoring, openspec change proposals, and Playwright agent-driven acceptance testing. I write the PRD, defend the scope, and ship the prototype.

Experience

HaoYuanShu (好願書) —Independent iOS Product

Founder & Product Manager

- Shipped v1 in two weekends via a three-stage **Spec-Driven Development workflow** (Claude Design → openspec → Claude Code), authoring `proposal.md` / `design.md` / `tasks.md` as single source of truth.
- Designed v2 with a four-phase **AI-Native PM workflow**: source curation, MRD/PRD authoring, engineering hand-off (Mermaid Gantt + per-user-story GitHub issues), and Notion sync. Published as a public case study.
- Defended product judgment against AI defaults: decoupled wooden-fish tap from counter (ritual safety), stripped 80% of UI from Immersive Mode, and rejected streak gamification after JPSP research showed **63% post-break abandonment**.

Solo project

Apr. 2026 – Present

Cayin Technology

Frontend Developer

- Owned the frontend product surface of the **Device Management module** on goCayin (SaaS digital signage for enterprise clients running 100+ devices). Partnered with PMs to translate ambiguous customer requirements into Overview, List, Preview, and bulk-action flows.
- Drove the user-centric design call that non-technical operators must complete device provisioning without engineer assistance. Pushed back on PM proposals that added cognitive load; proposed alternate IA based on support-ticket patterns.
- Led a **technical-debt initiative** refactoring a 1,200-line device-management dialog into reusable Vue Composables —pitched the case to the team lead before writing code.

Mar. 2024 – Mar. 2026

Alpha Robo-Advisor

Frontend Developer

- Translated ambiguous business and compliance requirements into concrete UI features for the **Alpha Stable Return** product; instrumented **GA4 / GTM** tracking to give the PM funnel data on the onboarding-to-first-deposit conversion.

Taipei, Taiwan

Jun. 2022 – Nov. 2023

PricewaterhouseCoopers Taiwan

Auditor (Assurance Services)

- Supported financial-statement audits for listed clients; built the habit of treating every claim as something that needs evidence —the same discipline I now apply to AI-generated PRDs.

AI Native PM: An Agentic Workflow From Market Research to Engineering Delivery

- End-to-end case study using HaoYuanShu v2: source curation, NotebookLM challenger prompts, MRD/PRD authoring, openspec scope, Playwright agent acceptance —and the five corrections I made to AI output.

SDD in Practice: Building HaoYuanShu with Claude Design, openspec & Claude Code

- The v1 build log: shipping an iOS app in two weekends with a Spec-Driven Development workflow —what AI got right and what required human override.

Skills

Product	Product discovery, Market research, MRD / PRD authoring, Roadmap & milestone planning, User-story decomposition, Stakeholder management, Cross-functional collaboration, Scope negotiation
AI-Native Workflow	Claude Code, openspec (Spec-Driven Development), NotebookLM (challenger-prompt research), Playwright agent-driven acceptance testing, MCP integrations (Notion, Pencil), Prompt design
Engineering	Vue 3 / Composition API, TypeScript, Laravel, Pinia, GitLab CI, Cross-subdomain auth, GA4 / GTM analytics instrumentation
Business & Domain	Audit-grade financial literacy, FinTech & IoT SaaS product context, B2B enterprise-customer workflows
Languages	Mandarin Chinese (Native), English (Professional working)

Education

Yuan Ze University

B.B.A., Double Major in International Business and Accounting

Taoyuan, Taiwan

Sep. 2014 – Jun. 2018
